Don't Let Coolant System Over Heating Issues Potentially Cost You Thousands of Dollars in Expensive Engine Repairs

Excessive heat from coolant leaks or restrictions will cause metal to expand beyond normal limits and clearances. The result can be piston scuffing, cylinder scoring, valve sticking, damaged valve guides and even warped cylinder heads. Overheating also can crush an otherwise good head gasket, causing the gasket to leak when the radiator is refilled with coolant. This type of wear and tear can potentially cost you thousands of dollars in engine repairs.*

Unfortunately, coolant leaks can occur anywhere in the cooling system, including the water pump, hoses, radiator, heater core, thermostat housing, expansion plugs, head gasket, combustion chamber or cylinder block. Regardless of where a leak occurs, the end-result is always the same: coolant loss that sooner or later allows the engine to overheat.

The Solution: Restore Your Cooling System Back to Its Original Condition with:

Thoro-Flush COOLANT SYSTEM FLUSH

- Opens and cleans out plugged heater cores
- Clears out gelled Dex-Cool with a simple flush
- Diesel Oil cooler failure, cleans cooling system in single flush
- Safe for use on cast iron, aluminum, brass and plastic
- For improved coolant flow and temperature control, always flush with Thoro-Flush for the best possible results
- Thoro-Flush is a concentrated powder and the most powerful flush available

Part No. 468-9110-16

All Weather Seal STOPS COOLANT LEAKS

- Pour-and-Go Formula does not require flushing of coolant mixture
- Stops Coolant Leaks in Minutes
- Stops Head/Intake gasket, radiator and other coolant system leaks
- Permanently blends with all coolants / antifreezes to stop existing and future leaks
- **Will not clog heater cores**
- Micro fibers detect and stop leaks at their source
- Formulated to work in the most extreme weather conditions, HOT or COLD

Part No. 468-9130-16

FOR AROUND \$40 (RETAIL) IT'S CHEAP INSURANCE!
